STIKATAK'S DOUBLE STICK SOLUTIONS

The power of Stikatak has never been greater as the leading flooring accessories brand benefits from new product investment. Now as part the Interfloor group, adhesives innovation has grown to match the precise world of double stick installations where exceptional carpet stability and wear protection is combined with walking comfort.

STK900 is a specially formulated adhesive with long “open” time which is easy to trowel. It is suitable for the permanent bond of carpet to double stick underlays including market leaders Duralay Durafit, Duralay System Ten, Tredaire Technics and Tredaire Terra Firma.

New tackifier adhesive STK950 has been introduced as a permanently tacky dispersion ideal for bonding the Duralay and Tredaire underlays to the sub-floor. It is packed in a rectangular shaped bucket for ease of use when applying with a Stikatak tackifier trowel. Both adhesives are water based low odour products conforming to international standards.

When installation time is short there's one flooring adhesive that stands out. STK300 from Stikatak is one of the most popular fast grab multi-purpose flooring adhesives offering exceptional bond strength. It can be used for a variety of floorcovering fittings on most sub-floors. STK300 is a highly versatile, water-based, synthetic latex, multi-purpose adhesive which is easy to trowel and is non-staining. It has a 10-15 minute “open” time and is available in 15kg tubs covering approximately 45 square metres.

To find out more about STK300, STK900, STK950 and Stikatak's wide range of smoothings, underlayments, moisture suppressants and fitting tools call either of the sales offices (Interfloor: 01706 238810; Stikatak: 020 8839 4405) or talk to your Interfloor or Stikatak account manager.

The Stikatak Flooring Adhesives and Floor Preparation catalogue is also available free on request.
